

Mosquito Coils

**Economical
packs**

General Description: Moskill Mosquito coils are used for protection against mosquitoes.

Mode of Action: Insecticides are formulated at relatively low dosage. This improves the limited effect of the simple smoke particles and leads to a significant improvement in the biological effect of coils, which mainly consist of repellents and after prolonged exposure, have a potential knock-down or killing effect. Mosquitoes intensely dislike the smell of the chemical repellent.

Features and Benefits

- Design standard Moskill mosquito coils for 8hrs burning duration.
- Contains natural pyrethrum.
 - Low mammalian toxicity.
 - Low persistence in the environment.
- Rapid knockdown.
- No resistance build up.
- Long burning time of coil is minimum seven hours.

Instructions for use:

- Take the twin coils out of their packaging and separate by slightly pulling the heart (central part) in different directions
- Place the coil on the metal stand using the pre-stamped hole in the heart (central part)
- Place the coil and stand on a heat resistant surface (e.g. saucer)
- Light the end of the coil with an open flame until the coil mass is glowing evenly
- Place the coil away from all flammable or combustible materials
- Use one coil for a room of approx. 20 m³

Precautions:

- Do not use coils in the presence of a person with allergies
- Place the coil only on stand provided by manufacturer
- Take care when lighting the coil
- Do not place the coil close to combustible and/or flammable materials
- Do not store the coils together with food and beverages
- Keep out of reach of children
- If a coil breaks, only burn broken segments on an appropriate stand and on a heat resistant surface.

Packaging : Normal & Scented coils. Color of the finished coil is red and green.
Inner box packaging contains 5 double ring coils plus 1 metal stand.
